

PhotoShare

Advanced Web Technologies – Project Report

1. Project Overview:

PhotoShare is a simple web-based photo sharing system developed using PHP and MySQL. It allows users to register, log in, upload photos, view photos, and delete their own photos.

2. Architecture & Project Structure:

The project uses a simple MVC-inspired structure:

Core/ – Core application files.

Config/ – Database configuration.

Public/ – Main public files.

View/ – User interface files.

Controller/ – Handles application operations.

Models/ – Handles database operations.

Database.sql – Database structure and tables.

README.md – Project information and instructions.

3. Database Design:

The project uses a MySQL database named alzikrayat. It contains Users and Photos tables. Each photo is connected to its owner using the User ID.

4. Main Features:

User registration and login.

Uploading and displaying photos.

Deleting user's own photos.

MySQL database integration.

Session-based authentication.

5. Novelty/Advanced Features:

PHP and MySQL database integration.

MVC-inspired project structure.

User authentication and sessions.

Photo upload functionality.

Relationship between Users and Photos.

Checking photo ownership before deletion.

6. Conclusion:

PhotoShare demonstrates the use of PHP, MySQL, HTML, CSS, and JavaScript to build a simple photo sharing system with authentication, database relationships, and photo management..
